REMARKS

Following a standard dose of winter cold and rain, the spring of 2015 was warm and dry, allowing the vines to grow quickly and evenly and flowering to pass off without incident. June and July were warm and dry, accentuating the hydric stress and halting the growth of the vines - good news as the grapes began to mature. In some cases this lack of water required us to thin out the bunches, which were present in abundance thanks to the clement flowering period. Warm and dry conditions in September and October allowed the maturing process to build to a perfect climax, with thick skins and a superb degree of ripeness from the red grape varieties.
